

Duplex Heavy Duty Series Compressors

Commercial Two Stage 5 HP, 7.5 HP and 10 HP

GC4102003

- Dual pump configuration for more efficient cooling and longer compressor life.
- Heavy duty inlet filter silencer provides lower sound levels and long maintenance intervals.
- Finned intercooler cools air delivery into second stage providing greater compression and efficiency.
- Centrifugal unloader - positive acting, increases motor life by allowing the compressor to start unloaded every time.
- Finned after-cooler provides low operating temperatures for maximum cooling, longer life and consistent performance.
- Heavy duty solid cast iron pumps. Lower RPM's. Low operating speeds reduce valve cycles, ring and bearing wear to prolong life of unit.
- Reliable splash lubrication
- Single and three phase industrial Baldor motors
- Enclosed industrial belt guard for operating safety
- Easy to read tank gauge (0 - 300 PSI)
- Factory preset pressure switch
- ASME 120 and 200 gallon air receivers
- Manual drain valve standard; Automatic drain available (part # 907001)
- Factory installed magnetic starter provides thermal overload protection to the motor
- Oil sight glass for viewing color, clarity and level of compressor oil
- Program logic device controls operation of two compressor motors by sharing the load equally between alternating motors.
